

HMI with data converter + FANUC CNC

End User using Machine Tools

Who wants to improve operating rate, stabilize operation, and collect information on data of peripheral equipment as well as machine tools.

Demo Video

Easy and Simple connectivity and visualization of FANUC CNC by HMI with data converter

Effortless connection

- CNC information can be easily visualized with other peripheral devices without changing existing programs or architecture.
- Only IP address setting is needed on CNC side and data will be able to be visualized with HMI.

Effective maintenance

By managing the information in the CNC area, it is possible to perform predictive maintenance (effective maintenance, for example, the replacement timing of machine tools) and also see operating status by Factory or Line bases.

Achieve IoT

CNC data and other device data can be collected through HMI (as a gateway) by using OPC-UA/Modbus and used as an ANDON or for analysis to realize IoT by using BLUE Open Studio.

Simple Visibility - Increasing information Value -

Software

- BLUE [Go to Web](#)
- GP-Pro EX [Go to Web](#)
- BLUE Open Studio [Go to Web](#)

plus

03

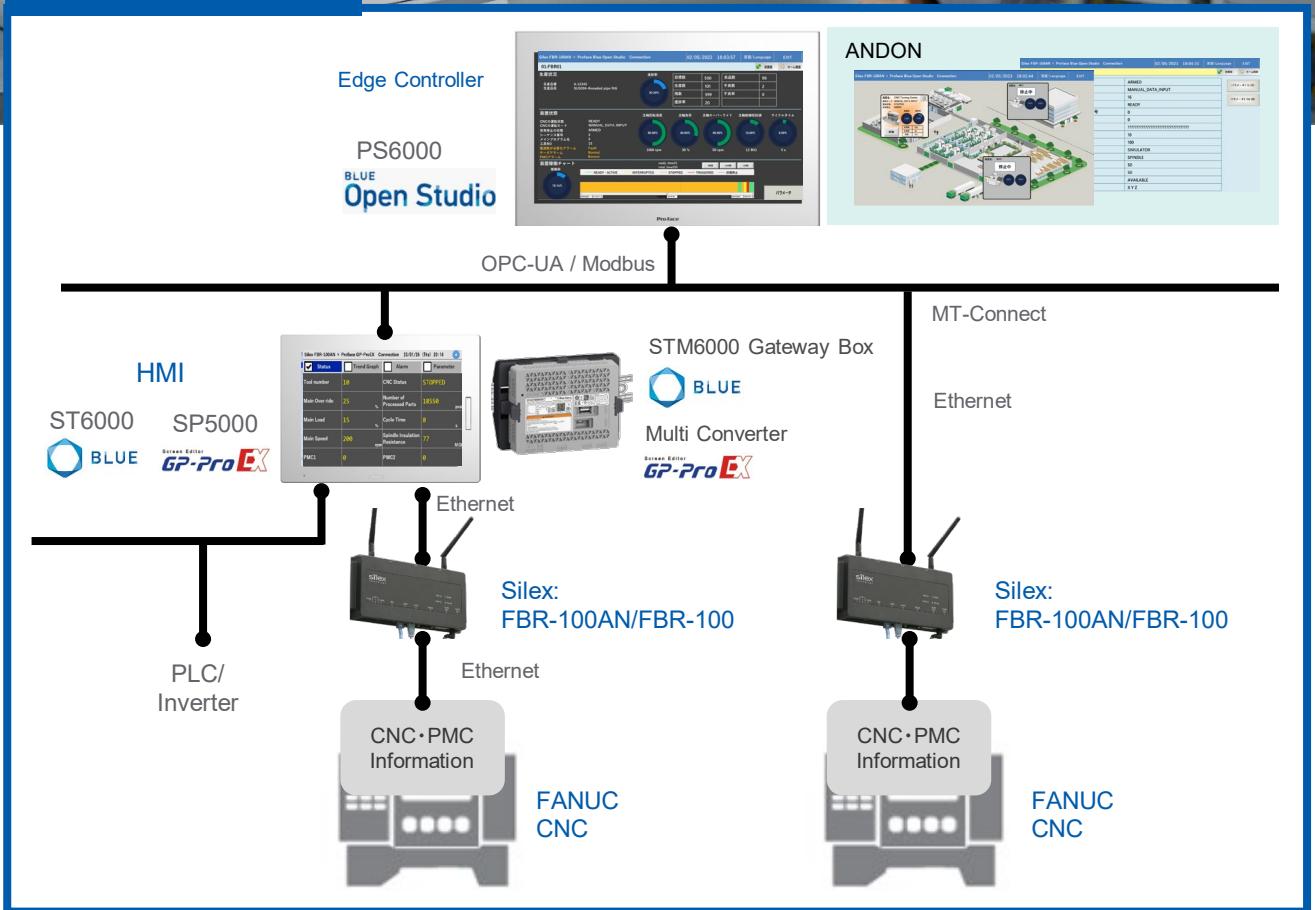

Silix FBR-100AN(With Wifi) / FBR-100 (Without Wifi)

- SP5000 [Go to Web](#)
- ST6000 [Go to Web](#)
- STM6000 [Go to Web](#)
- PS6000 [Go to Web](#)
- Pro-face Edge Box [Go to Web](#)
- Multi-Converter [Go to Web](#)

How does it work

- 1 Connect FANUC CNC to Silex FBR-100 with Ethernet.
- 2 Connect Silex FBR-100 to HMI with Ethernet.
- 3 Do the IP address settings on each device
- 4 Connect HMI and BLUE Open Studio with MODBUS TCP/OPC-UA or Connect Silex FBR-100/100AN and PS6000 directly with MT-Connect
