Subject: SSWIN 3.1 – Can't Download using DOS Download Disk   AN# 1089B
Date: 08/26/99
Name: Paul Derbyshire
Page: 1 of 1

Description: SSWIN 3.1 – Can't Download to a 34XX workstation using a DOS Download Disk created in Softscreen Download.

Affected Products:

-Softscreen for Windows 3.1
-Softscreen Workstations with bootloader 3.X
-3408T/3408KP, 3410T/3410KP

Problem:

After creating a DOS Download disk the disk will not download correctly and returns that there is an error in the ".lst" file (title line).

Uploads from the Xycom do not have this problem and can be immediately downloaded back into the Xycom without any errors.

Solution:

1) After creating the DOS download disk open the ".lst" file on the disk using notepad.
2) Delete the line that starts with "-Title"
3) Save the file and re-attempt download.

This must be done for every download disk that is created using the Softscreen Download utility.
